INHA/PISA database search functions and topics

- Analytical index of ancient engraved books
- Confrontation between ancient engravings and modern photographs of the vases
- Census of works anciently known and now lost
- History and fortune of the vases
- History of taste
- History of iconographic interpretations
- Reconstitution of scattered

The project: objectives

The LASIMOS Project originated from the need of strengthen connections and collaborations amongst scholars interested in the history of knowledge on ancient vases and in their collecting history.

The main objectives of the Project are:

- to create an international network about the history of Greek and South-Italian vases and on the history of the evolution of their connoisseurship;
- to reconstruct the ancient collections of vases;
- to investigate the development of studies on the vases, and to analyse the changes of taste during time.

This can be done by collecting and comparing information derived from ancient books, manuscripts, prints, drawings and photographs.

The participation in the LASIMOS Network is OPEN both to single individuals and to institutions interested in its topic

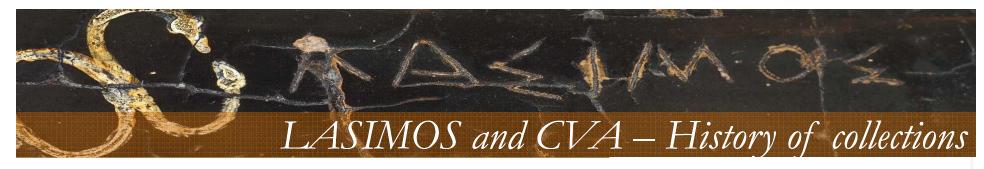

Building up a collaborative database

The LASIMOS Project is currently developing a collaborative database for recording and exchanging data on the history of collections of vases.

It will allow all partners to log-in and propose some information or documentation on the part on which they will have the responsibility.

This database will be hosted by the Institute National d'Histoire de l'Art in the AGORHA System, currently under development, into the programme "Histoire des vases Grecs" coordinated by M. Denoyelle.

Information already collected by M. Denoyelle from her researches and from the studies carried out by M.E. Masci and other scholars will be imported into the AGORHA system during the next months.

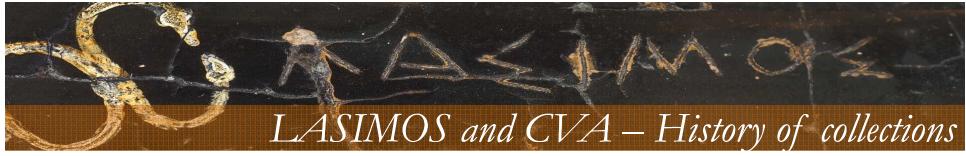

The LASIMOS vase

The LASIMOS Project takes its name from the Apulian "Lasimos vase" (Paris, Musée du Louvre, K 66), so called from the Oscan name of the painter engraved on the neck.

This vase and its inscription resume in one symbolic object the genre of research which is carried out.

His history, and its passage in various ancient collections, have been reconstructed thanks to information derived from unedited and edited texts, and through the identification of the vase in drawings and prints.

The LASIMOS vase - HISTORY

- Before 1688 Naples, collection of Giuseppe Valletta.
- 1688 purchased by Francesco Ficoroni for the collection of Cardinal Filippo Antonio Gualtieri (Rome).
- 1730 purchased by Pope Clemens XII (Lorenzo Corsini) for the Vatican Library.
- From 1734 displayed in the Vatican Library.
- 1797 carried in Paris by Napoleon, in the Musée Napoléon.
- before 1809 restored by Luigi Brocchi (in the Louvre museum)

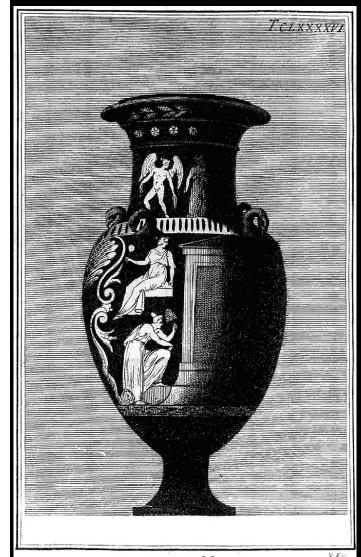

The clementine Gallery of the Vatican Library

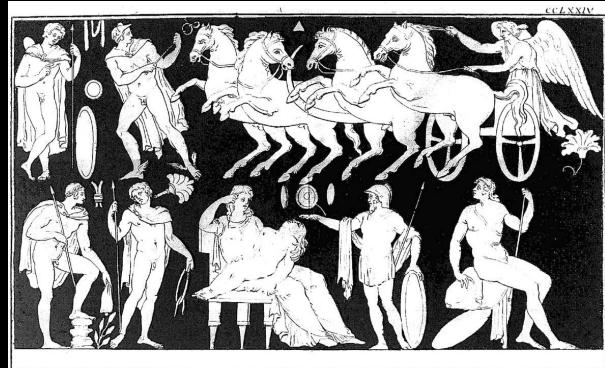

Engraving by Jean-Baptiste de Poilly (Paris, 1712-1760)

The LASIMOS vase: the death of Archemoros

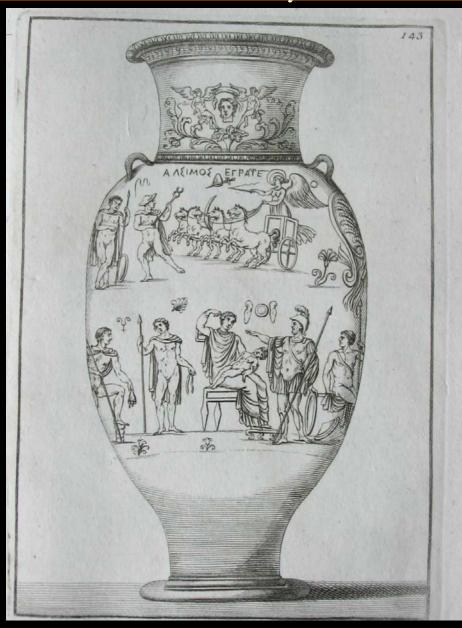

Drawing by Bartolomeo Poli (1734) – Pesaro, Oliveriana Library, MS 285

In Museo Vaticano

G. B. Passeri, Picturae Etruscorum in Vasculis, Rome 1767-1775, Pl. 196, 274

J. J. Winckelmann, Monumenti antichi inediti, Rome 1767, Pl. 143

The inscription engraved on the LASIMOS vase

LASIMOS and **CLAROS**

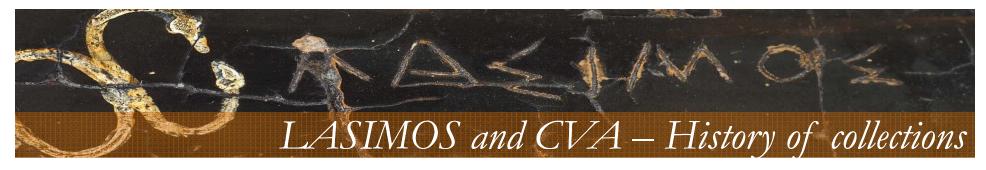

The LASIMOS project conducts a specific research on the history of vases. A collaborative database will collect information and documents on this topic.

CLAROS allows for interoperability amongst various databases:

- The Beazley Archive is the most important and complete catalogue for Greek vases;
- The Lexicon of Greek Personal names contains many of the names inscribed as signatures on Greek vases;
- The Lexicon Iconographicum Mythologiae Classicae contains data about figures and scenes represented on the vases

Within CLAROS Network, the LASIMOS project:

- Can offer information on the collecting history of vases and
- Can gain profit from the information coming from the databases of CLAROS partners.

LASIMOS and CVA

The research carried on by the LASIMOS project can also be useful for CVA:

both scholars consulting CVA volumes and authors of the forthcoming CVA volumes can derive from the LASIMOS collaborative database and network, information on many vases that are stored in our museums, such as:

- findspots;
- collecting history;
- conservation history;
- related ancient documentation (manuscripts, old books, prints, drawings...);
- history of the studies pertaining a given vase.

Moreover, all the interested researchers can take part in the LASIMOS Network, thus contributing in enriching its database with more information.
